

## *Raised Relief Maps*

### **State Maps**

We offer raised relief maps of many of the states in the United States. Many state maps are in two styles, Raven and NCR. Raven maps provide dramatic detail and use soft colors to represent elevation. NCR (Natural Color Relief) maps offer the same detail but use colors appropriate to the natural terrain of the state.

### **How it is done**

Hubbard Scientific is the largest manufacturer of Raised Relief Maps in the United States. They begin with a flat map printed on sturdy vinyl. They then construct a terrain model using digital elevation data from the USGS and other sources. The vinyl map is carefully registered with the terrain mold. Once the registration of the map is complete, it is vacuum formed over the terrain model. The result is a truly exceptional visual and tactile reference. You will be proud to display one of our raised relief maps in any setting.
